YANG Data Model for IS-IS Application-Specific Link Attributes and
Flexible Algorithm
draft-ietf-lsr-isis-flex-algo-yang-02

Abstract

This document defines a YANG data model to support IS-IS Application-Specific Link Attributes and Flexible Algorithm.

Status of This Memo

This Internet-Draft is submitted in full conformance with the provisions of BCP 78 and BCP 79.

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF). Note that other groups may also distribute working documents as Internet-Drafts. The list of current Internet-Drafts is at <https://datatracker.ietf.org/drafts/current/>.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

This Internet-Draft will expire on 15 March 2026.

1. Overview

This document defines two YANG [RFC7950] data modules. The first module is to provide support for configuration and operational state for IS-IS Application-Specific Link Attributes as defined in [RFC9479], and the second module is to support IS-IS Flexible Algorithm as defined in [RFC9350]. Both modules are augmenting the IETF IS-IS YANG model [RFC9130].

1.1. Requirements Language

The key words "MUST", "MUST NOT", "REQUIRED", "SHALL", "SHALL NOT", "SHOULD", "SHOULD NOT", "RECOMMENDED", "MAY", and "OPTIONAL" in this document are to be interpreted as described in [RFC2119].

2. YANG Module for IS-IS Application-Specific Link Attributes

This document defined a YANG module for IS-IS Application-Specific Link Attributes as defined in [RFC9479].

```

module: ietf-isis-link-attr
  augment /rt:routing/rt:control-plane-protocols
    /rt:control-plane-protocol/isis:isis:
      +--rw isis-link-attr

3. YANG Module for IS-IS Flexible Algorithm

This section defines the YANG module for IS-IS Flexible Algorithm. The module uses the identities defined in the IANA-maintained YANG modules for IGP Algorithm Types [IANA-IGP-ALGO-Types] and IGP Metric Type [IANA-IGP-Metric-Types] in [I-D.ietf-lsr-ospf-flex-algo-yang].

```

module: ietf-isis-flex-algo

4. Security Considerations

The YANG modules defined in this document are designed to be accessed via YANG-based management protocols, such as NETCONF [RFC6241] and RESTCONF [RFC8040]. These protocols have to use a secure transport layer (e.g., SSH [RFC4252], TLS [RFC8446], and QUIC [RFC9000]) and have to use mutual authentication.

The Network Configuration Access Control Model (NACM) [RFC8341] provides the means to restrict access for particular NETCONF or RESTCONF users to a preconfigured subset of all available NETCONF or RESTCONF protocol operations and content.

There are a number of data nodes defined in this YANG module that are writable/creatable/deletable (i.e., "config true", which is the default). All writable data nodes are likely to be reasonably sensitive or vulnerable in some network environments. Write operations (e.g., edit-config) and delete operations to these data nodes without proper protection or authentication can have a negative effect on network operations. The following subtrees and data nodes have particular sensitivities/vulnerabilities:

/isis:isis/isis-link-attr/link-attr-op-mode - Modification to the protocol operation mode may result in traffic disruption.

/isis:isis/flex-algo - Modification to flex-algo configuration could be used to mount a DoS attack. For example, changing of calc-type may result in routing loops.

Some of the readable data nodes in the modules may be considered sensitive or vulnerable in some network environments. It is thus important to control read access (e.g., via get, get-config, or notification) to these data nodes. The exposure of the Link State Database (LSDB) will expose the detailed topology of the network. This may be undesirable since both due to the fact that exposure may facilitate other attacks. Additionally, network operators may consider their topologies to be sensitive confidential data.

5. IANA Considerations

This document registers a URI in the IETF XML registry [RFC3688]. Following the format in [RFC3688], the following registrations are requested:

```
URI: urn:ietf:params:xml:ns:yang:ietf-isis-link-attr
Registrant Contact: The IESG.
XML: N/A, the requested URI is an XML namespace.
```

```
URI: urn:ietf:params:xml:ns:yang:ietf-isis-flex-algo
Registrant Contact: The IESG.
XML: N/A, the requested URI is an XML namespace.
```

This document registers the YANG module in the YANG Module Names registry [RFC7950].

```
name: ietf-isis-link-attr
Maintained by IANA? N
namespace: urn:ietf:params:xml:ns:yang:ietf-isis-link-attr
prefix: isis-link-attr
reference: RFC XXXX
```

```
name: ietf-isis-flex-algo
Maintained by IANA? N
namespace: urn:ietf:params:xml:ns:yang:ietf-isis-flex-algo
prefix: isis-flex-algo
reference: RFC XXXX
```

6. Acknowledgements

Thanks to Michal Vasko for his YANG doctors review.

The YANG model was developed using the suite of YANG tools written and maintained by numerous authors.

Appendix A. Example IS-IS Flex-Algo Configuration

The following is an example configuration for IS-IS Flexible Algorithm using the YANG model defined in this document.

Note: '\ ' line wrapping per [RFC8792].

```
<?xml version='1.0' encoding='UTF-8'?>
<te xmlns="urn:ietf:params:xml:ns:yang:ietf-te">
  <enable>true</enable>
  <globals>
    <named-admin-groups>
      <named-admin-group>
        <name>blue</name>
      </named-admin-group>
    </named-admin-groups>
  </globals>
</te>
<routing xmlns="urn:ietf:params:xml:ns:yang:ietf-routing">
  <router-id>1.1.1.1</router-id>
  <control-plane-protocols>
    <control-plane-protocol>
      <type xmlns:isis="urn:ietf:params:xml:ns:yang:ietf-isis">\
        isis:isis</type>
      <name>isis</name>
      <isis xmlns="urn:ietf:params:xml:ns:yang:ietf-isis">
        <system-id>1111.2222.3333</system-id>
        <area-address>49.0001.0000.0000.0001</area-address>
        <isis-flex-algo xmlns="urn:ietf:params:xml:ns:yang:\
          ietf-isis-flex-algo">
          <flex-algo>
            <algo-number>200</algo-number>
            <admin-groups>
              <exclude-admin-groups>blue</exclude-admin-groups>
            </admin-groups>
            <metric-type xmlns:iana-metric-types=\
              "urn:ietf:params:xml:ns:yang:iana-igp-metric-types">\
                iana-metric-types:igp-metric</metric-type>
            <calc-type xmlns:iana-algo-types=\
              "urn:ietf:params:xml:ns:yang:iana-igp-algo-types">\
                iana-algo-types:algo-spf</calc-type>
            <prefix-metric/>
            <priority>100</priority>
          </flex-algo>
        </isis-flex-algo>
      </isis>
    </control-plane-protocol>
  </control-plane-protocols>
</routing>
```

Appendix B. Example IS-IS Flex-Algo Configuration (JSON)

The following is an example configuration for IS-IS Flexible Algorithm in JSON format using the YANG model defined in this document.

```
{
  "te": {
    "enable": "true",
    "globals": {
      "named-admin-groups": {
        "named-admin-group": {
          "name": "blue"
        }
      }
    },
    "_xmlns": "urn:ietf:params:xml:ns:yang:ietf-te"
  }
}

{
  "routing": {
    "router-id": "1.1.1.1",
    "control-plane-protocols": {
      "control-plane-protocol": {
        "type": {
          "_xmlns:isis": "urn:ietf:params:xml:ns:yang:ietf-isis",
          "__text": "isis:isis"
        },
