1. Introduction

This is a proposal for a Unique internet user id that a user of internet that uses multiple services in internet can create by visiting a website like uiuid.??? and give his or her name and date of birth and whatever data may be fingerprint and it would give unique internet user id cookie

Summary

So i am an internet user i visit uiuid.??? and give my details and it gives me back a unique internet user id cookie back. So when i log into my hpanel.hostinger.com account as pradeep@dhyanayoga.info it would popup a dialog before setting its cookie whether to merge it with the unique internet user id cookie. So i would have two cookies and it would get stored in WWW space in uiuid.???. After i logout and on next session i should be able to login to hostinger without giving password , so some kind of seamless single sign on is possible

Each new device i use , i would have to set my uiuid cookie in the new device by visiting the uiuid.???

I am an internet user that has never created uiuid. In that case the client device would request the user thats me to create it by popups.

I visit uiuid.gov or uiuid.org and it asks for my unique name. If it is already taken it asks for more qualifiers.

It has to be decided how long the internet uiuid is .. so my name is Pradeep kumar xplorer , it would generate a unique id and no two names would have same uiuid.

This matter has to be researched. I have to be able to access sun.com labs in menli park to come with a detailed design. I am now stranded in india injured shuttling between bangalore and hassan. I have no income and exploited from 2002 by a large organisation of clever thieves. I do not have any income past oct 2002 nor retired nor getting any disability or unemployment nor ever got paid for my yoga books and guidance all payments to me stolen. I am given 100 indian rupees everyday. I am walking with a fractured right feet little finger after the indonesians force majeure me and detained underfed and injured me. I demand access to my email pradeep.kumar@sun.com and my office in menlo park next week. My website is now not showing my files or books because i could not pay hostinger.com 470rs. I do not have any ATMs or paypal account and i have ustaxcourt.gov 10889-25L not solved I am usa tax payer 619726729 prevented from living and working in california as software engineer and yoa guide by clever criminals employed in us cp ice.gov uscis.dhs.gov and they are continuing the crime by indians. I have changed my name from pradeep kumar pulappatta to pradeep kumar xplorer in 2009 its still not changed in usa and my accounts stolen and operated in usa as pradeep kumar pulappatta

Pradeep

User Experience or User interface

when a user logs onto the internet or starts using a desktop or smart phone he or she would be informed that there is a way to have a better experience of using many services in internet by having a Unique internet user identity by signing up for a Unique internet username

The user is informed by popups or some other mechanism. This would result in the user visiting <http://uiuid.gov> or <http://uiuid.org> or whatever website near by

First name

Middle name

Last name

What would you like your unique internet username be?

if i input Pradeep for first name and Last name Xplorer

the userinterface could suggest some possible unique internet username like pxplorer or pradeepkumaxplorer in click to select menu

Lets say i am the user and selected pxplorer. if there is a conflict i would be informed and select another.

After deciding on unique internet username the uiuid.gov request to register with a password and generates a unique internet user id and lets me associate more details with it. Some could be like your thumb fingerprint or other unique authentication details. A current location of india can prevent logging into pxplorer internet services from usa or canada a cybercrime i am facing as registrant author of dhyanyoga.info from 2004 and webmail pradeepan88@hotmail.com from 1998.

So i as unique internet user pxplorer have already created the unique internet user id and is browsing the internet as pxplorer. I now login to mail.hostinger.com and logs in as pradeep@dhyanayoga.info and password. the hostinger.com would merge its cookie with cookie set by uiuid.gov in my client system. If i log out and visit mail.hostinger.com again then it would auto login me as pradeep@dhyanayoga.info unless i clear the unique internet user name from my client session.

Some hacker from canada stealing my money cannot now login to mail.hostinger.com. The implementation has to be researched

Also the credentials of unique internet username pxplorer can stored in a smartcard. if my device have a fingerprint interface and if the user has already a unique internet user name then putting my finger print or smart card can make the user avoid remembering those details.

As internet is global the smartcard can be used to enable some kind of internet economy and internet cash.

User interface protocol basic requirements

I have to be able to have a domain uiuid.org and have the user register for a unique internet user name and an associated unique internet user id. So i visit uiuid.org and create a pxplorer userid. I should have access to another service i use right now i am author registrant of dhyanayoga.info and i can then add a username registration and password. So when i login next time i set my uiuid or username as pxplorer and create a username password in dhyanayoga.info that would give the user access to book in <http://dhyanayoga.info/vvp.pdf> and through user interface interactions this would get linked to uiuid.org

Next time i login to uiuid.org as pxplorer it would show one of the services linked as dhyanayoga.info. So to develop a prototype i need to be able to program in two domains and access to client desktops devices and services of webhosting services like hostinger.com or access to my sun.com accounts in menlo park sun.com campus as pradeep.kumar@sun.com

I report i am stranded in india bangalore without any information about wife sindhu without income cheated by a large organisation of thieves from nov 2002. They portray me as a wealthy sun.com engineer that ran dhyanayoga.info services and client of all social media companies and service providers like royal orchid, radisson blu and has attacked and injured me using indian police, many in palakkad. I should be in mountainview living there
