## URN Namespace for MEF Documents

### Abstract

This document describes the Namespace Identifier (NID) "mef" for Uniform Resource Names (URNs) used to identify resources published by MEF Forum (<https://www.mef.net>). MEF specifies and manages resources that utilize this URN identification model. Management activities for these and other resources types are handled by the manager of the MEF Assigned Names and Numbers (MANN) registry.

### Status of This Memo

This document is not an Internet Standards Track specification; it is published for informational purposes.

This document is a product of the Internet Engineering Task Force (IETF). It represents the consensus of the IETF community. It has received public review and has been approved for publication by the Internet Engineering Steering Group (IESG). Not all documents approved by the IESG are a candidate for any level of Internet Standard; see Section 2 of RFC 5741.

Information about the current status of this document, any errata, and how to provide feedback on it may be obtained at <http://www.rfc-editor.org/info/rfc7818>.

## 1. Introduction

The MEF Forum (MEF) is a nonprofit international industry standards organization dedicated to the worldwide adoption of Carrier Ethernet (CE) networks and services. The forum creates specifications in the areas of Services, Architecture, and Operations and Management.

As part of these specifications efforts, there is a need to identify identifiers in a managed namespace that are unique and persistent. To ensure that this namespace's uniqueness is absolute, a registration of a specific URN Syntax [RFC2141] Namespace Identifier (NID) for use by MEF is being specified in this document.

## 1.1. Terminology

Acronym	Meaning
CE	Carrier Ethernet
MANN	MEF Assigned Names and Numbers
MEF	MEF Forum
NID	Namespace Identifier
NSS	Namespace-Specific String
RDS	Resolution Discovery System
URN	Uniform Resource Name

## 2. URN Specification for MEF

Namespace ID:

mef

Registration information:

registration version number: 1

registration date: 2016-02-08

Declared registrant of the namespace:

Registering organization

Name: MEF Forum

Address: 6033 W. Century Boulevard, Suite 1107  
Los Angeles, CA 90045  
United States

Designated contact:

Role: Manager, MEF Namespace

Email: namespace@mef.net

Declaration of syntactic structure:

The syntax of namespace-specific strings for the "mef" namespace is <NSS> in RFC 2141.

Relevant ancillary documentation:

MEF publishes information regarding the registered resources in the MEF Assigned Names and Numbers (MANN) registry (<https://www.mef.net/MANN>).

#### Identifier uniqueness considerations:

MEF will manage resource classes using the "mef" NID and will be the authority for managing resources and associated subsequent strings. MEF is expected to guarantee the uniqueness of the strings themselves, or it may permit secondary responsibility for certain defined resources.

MEF could allow for use of experimental type values for testing purposes only. Note that using experimental types may create collisions as multiple users may use the same values for different resources and specific strings.

#### Identifier persistence considerations:

MEF will update the MEF Assigned Names and Numbers (MANN) registry to document the registered resources that will use the "mef" NID.

#### Process of identifier assignment:

Assignment of a URN from the MEF namespace will be documented as part of the MEF Assigned Names and Numbers (MANN) registry.

#### Process of identifier resolution:

The namespace is not listed with a Resolution Discovery System (RDS). Therefore, this process is not relevant.

#### Rules for Lexical Equivalence:

The entire URN is case-insensitive.

#### Conformance with URN Syntax:

No special considerations

#### Validation mechanism:

None specified. URN assignment will be handled by procedures implemented in support of MEF activities.

#### Scope:

Global

### 3. Examples

The following are examples of URNs that MEF is looking to assign:

urn:mef:yang:mef-services

urn:mef:yang:mef-interfaces

### 4. Security Considerations

There are no security considerations other than those normally associated with the use and resolution of URNs in general, which are described in "Function Requirements for Uniform Resource Names" [RFC1737] and "URN Syntax" [RFC2141].

### 5. IANA Considerations

Per this document, IANA has added a new entry ("mef") in the "Uniform Resource Names (URN) Namespaces" registry available from the IANA site (<https://www.iana.org>).
