PKCS #8: Private-Key Information Content Types

Abstract

This document defines PKCS #8 content types for use with PrivateKeyInfo and EncryptedPrivateKeyInfo as specified in RFC 5958.

Status of This Memo

This is an Internet Standards Track document.

This document is a product of the Internet Engineering Task Force (IETF). It represents the consensus of the IETF community. It has received public review and has been approved for publication by the Internet Engineering Steering Group (IESG). Further information on Internet Standards is available in Section 2 of RFC 7841.

Information about the current status of this document, any errata, and how to provide feedback on it may be obtained at <https://www.rfc-editor.org/info/rfc9939>.

Copyright Notice

Copyright (c) 2026 IETF Trust and the persons identified as the document authors. All rights reserved.

This document is subject to BCP 78 and the IETF Trust's Legal Provisions Relating to IETF Documents (<https://trustee.ietf.org/license-info>) in effect on the date of publication of this document. Please review these documents carefully, as they describe your rights and restrictions with respect to this document. Code Components extracted from this document must include Revised BSD License text as described in Section 4.e of the Trust Legal Provisions and are provided without warranty as described in the Revised BSD License.

1.	Introduction
2.	Private-Key Information Content Types
3.	ASN.1 Module
4.	Security Considerations
5.	IANA Considerations
6.	References
6.1.	Normative References
6.2.	Informative References
	Acknowledgments
	Authors' Addresses

1. Introduction

The syntax for private-key information was originally described in [RFC5208], and the syntax was later revised by [RFC5958] to include

the AsymmetricKeyPackage content type that supports multiple PrivateKeyInfos. This document defines PKCS #8 content types for use with one PrivateKeyInfo and one EncryptedPrivateKeyInfo. These content type assignments are needed for the PrivateKeyInfo and EncryptedPrivateKeyInfo to be carried in the Cryptographic Message Syntax (CMS) [RFC5652].

Note: A very long time ago, media types for PrivateKeyInfo and EncryptedPrivateKeyInfo were assigned as "application/pkcs8" and "application/pkcs8-encrypted", respectively.

2. Private-Key Information Content Types

This section defines a content type for private-key information and encrypted private-key information.

The PrivateKeyInfo content type is identified by the following object identifier:

```
id-ct-privateKeyInfo OBJECT IDENTIFIER ::= { iso(1)
  member-body(2) us(840) rsadsi(113549) pkcs(1) pkcs-9(9)
  smime(16) ct(1) 52 }
```

The EncryptedPrivateKeyInfo content type is identified by the following object identifier:

```
id-ct-encrPrivateKeyInfo OBJECT IDENTIFIER ::= { iso(1)
  member-body(2) us(840) rsadsi(113549) pkcs(1) pkcs-9(9)
  smime(16) ct(1) 53 }
```

3. ASN.1 Module

The ASN.1 module [X680] [X690] in this section builds upon the modules in [RFC5911].

<CODE BEGINS>

PrivateKeyInfoContentTypes

```
{ iso(1) member-body(2) us(840) rsadsi(113549) pkcs(1)
  pkcs-9(9) smime(16) modules(0) id-mod-pkcs8ContentType(85) }
```

DEFINITIONS IMPLICIT TAGS ::=
BEGIN

-- EXPORTS ALL

IMPORTS

CONTENT-TYPE

```
FROM CryptographicMessageSyntax-2009 -- in [RFC5911]
{ iso(1) member-body(2) us(840) rsadsi(113549) pkcs(1)
  pkcs-9(9) smime(16) modules(0) id-mod-cms-2004-02(41) }
```

PrivateKeyInfo, EncryptedPrivateKeyInfo

```
FROM AsymmetricKeyPackageModuleV1 -- in [RFC5958]
{ iso(1) member-body(2) us(840) rsadsi(113549) pkcs(1)
  pkcs-9(9) smime(16) modules(0)
  id-mod-asymmetricKeyPkgV1(50) } ;
```

```
PrivateKeyInfoContentTypes CONTENT-TYPE ::= {
  ct-privateKeyInfo | ct-encrPrivateKeyInfo,
  ... -- Expect additional content types -- }
```

```
ct-privateKeyInfo CONTENT-TYPE ::= { PrivateKeyInfo
  IDENTIFIED BY id-ct-privateKeyInfo }
```

```

id-ct-privateKeyInfo OBJECT IDENTIFIER ::= { iso(1)
  member-body(2) us(840) rsadsi(113549) pkcs(1) pkcs-9(9)
  smime(16) ct(1) 52 }

ct-encrPrivateKeyInfo CONTENT-TYPE ::= { EncryptedPrivateKeyInfo
  IDENTIFIED BY id-ct-encrPrivateKeyInfo }

id-ct-encrPrivateKeyInfo OBJECT IDENTIFIER ::= { iso(1)
  member-body(2) us(840) rsadsi(113549) pkcs(1) pkcs-9(9)
  smime(16) ct(1) 53 }

END
<CODE ENDS>

```

4. Security Considerations

The security considerations in [RFC5958] apply here.

5. IANA Considerations

For each of the private-key information content types defined in Section 2, IANA has assigned an Object Identifier (OID). The OIDs for the content types have been allocated in the "SMI Security for S/MIME CMS Content Type (1.2.840.113549.1.9.16.1)" registry [IANA-CMS-CTS] as follows:

Decimal	Description	Reference
52	id-ct-privateKeyInfo	RFC 9939
53	id-ct-encrPrivateKeyInfo	RFC 9939

Table 1

For the ASN.1 module in Section 3, IANA has assigned an OID for the module identifier. The OID for the module has been allocated in the "SMI Security for S/MIME Module Identifier (1.2.840.113549.1.9.16.0)" registry [IANA-SMIME-MODS] as follows:

Decimal	Description	Reference
85	id-mod-pkcs8ContentType	RFC 9939

Table 2

IANA has updated the application/cms registration entry in the "Media Types" registry by adding RFC 9939 to the "Interoperability considerations" section and to the list of RFCs where Inner Content Types (ICTs) are defined (see the "Optional parameters" section) and by adding the following values to the list of ICTs:

```

* privateKeyInfo
* encrPrivateKeyInfo

```

IANA has also updated the "Security considerations" section in the application/cms entry as follows:

RFC	CMS Protecting Content Type and Algorithms
RFC 9939	privateKeyInfo and encrPrivateKeyInfo

Table 3
